Creating Engineering UNIX server accounts

Before you can begin to use the College of Engineering UNIX servers, you must first activate your engineering UNIX account. You can activate your account remotely using telnet.

**Account Activation using Telnet**

1) In Windows, Click the **Start** button and then **Run**…

2) In the text box, type in “**cmd**” and click OK

3) At the “C:\>” prompt, type in “telnet gigastar.eng.wayne.edu”

4) When prompted, enter your WSU AccessID & Password.

5) Press Enter when given the **TERM = (vt100)** prompt

6) When you are given the command prompt (ex: **gigastar%**) type **exit** and then hit enter.

Your account has now been activated. You may now login to any of the UNIX workstations and servers normally.
